What you can expect today

You'll discover the key ingredients for building a data platform and for unlocking the full potential of data science and business intelligence

Data Landscape @ RIS as the main IT provider for the Raiffeisenkassen Südtirol

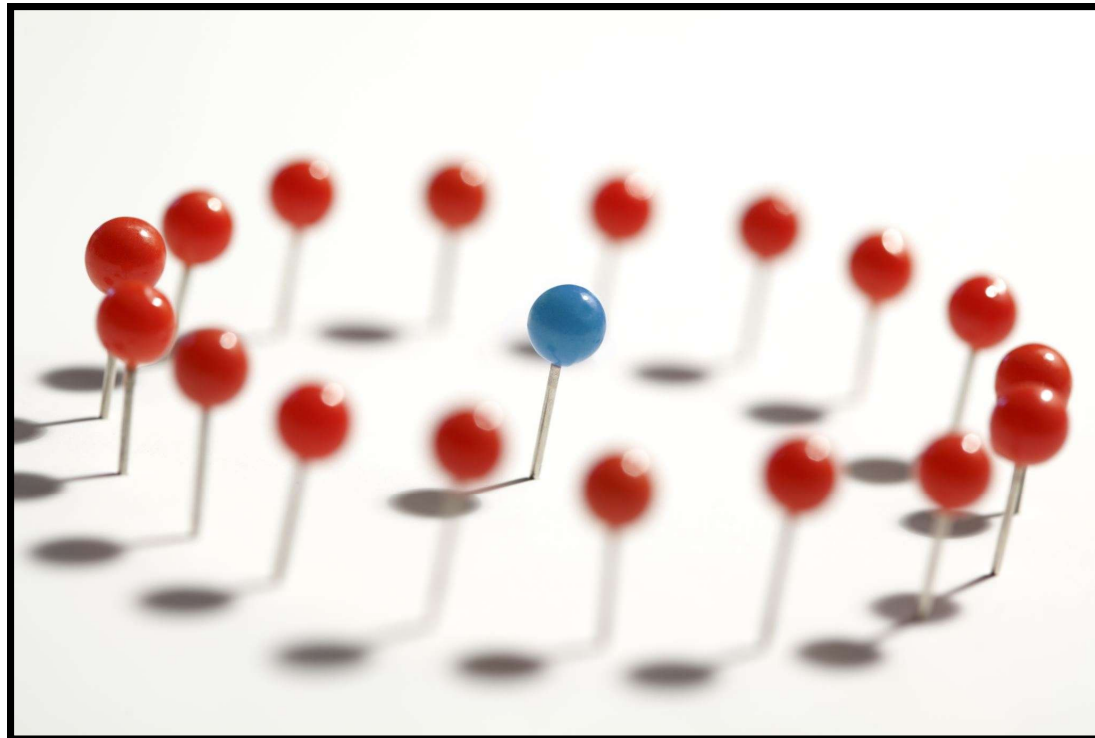

Growing Analytics Requirements

- What kind of clients do I have in my bank?
- What is their profit?
- How do my customers use their mobile banking?

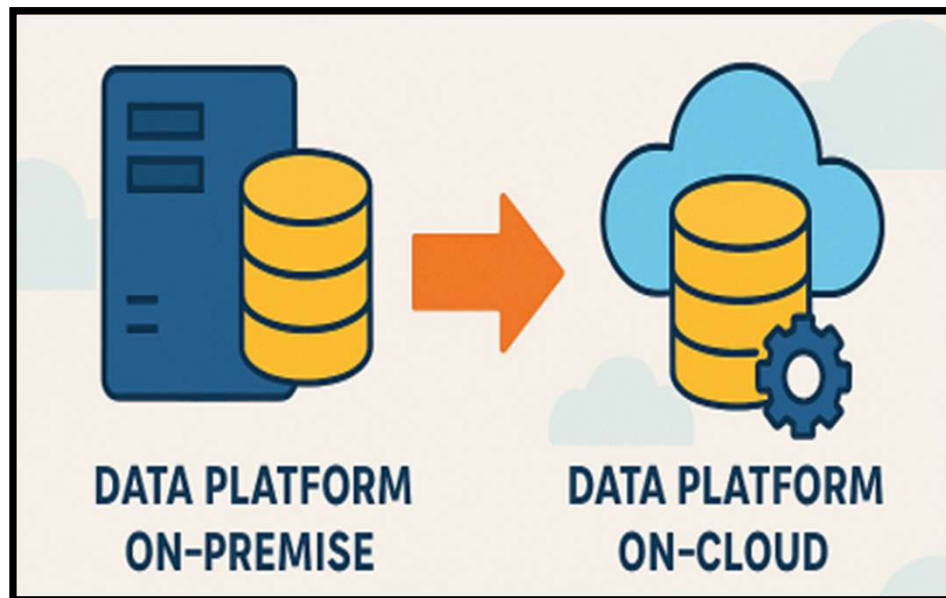

Our need was clear!

A central, governed platform for structured multi-source ingestion, environments for data engineering, exploration, science complemented by a BI solution that makes the data interactively accessible for a broad set of business users with different permissions!

We identified two initial options

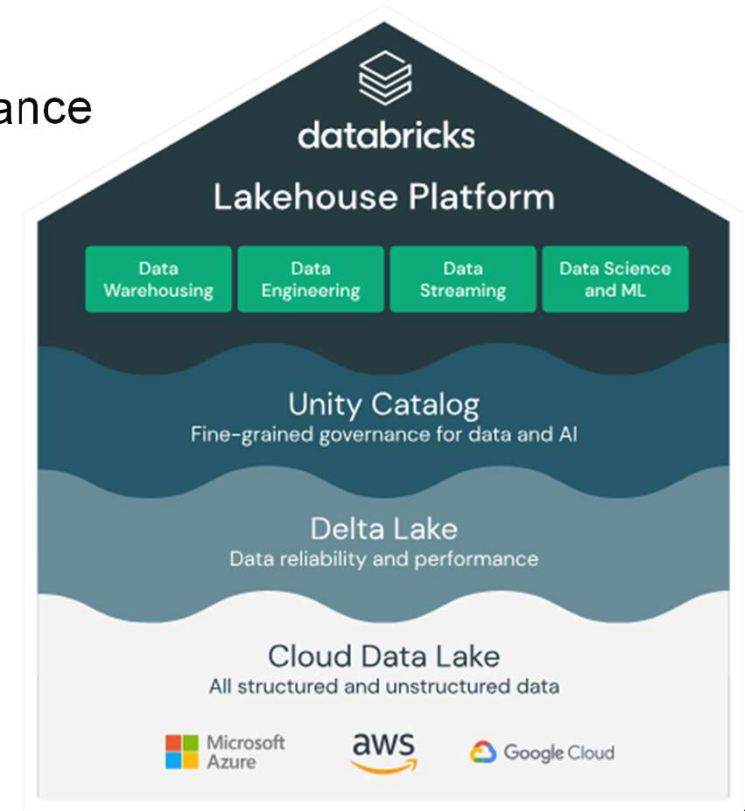

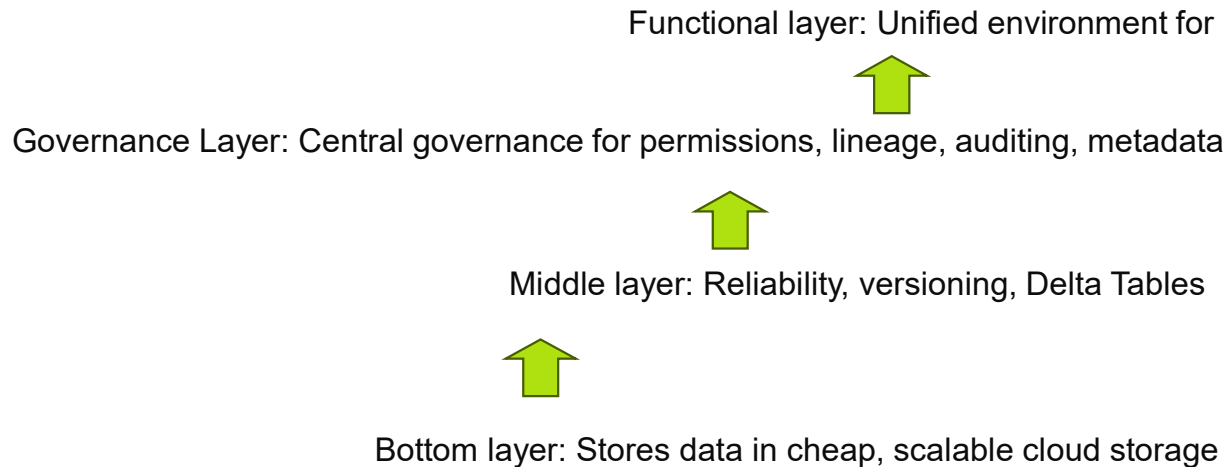

- Full data control
- Infrastructure In- house
- Predictable, fixed costs
- No cloud policy need

vs

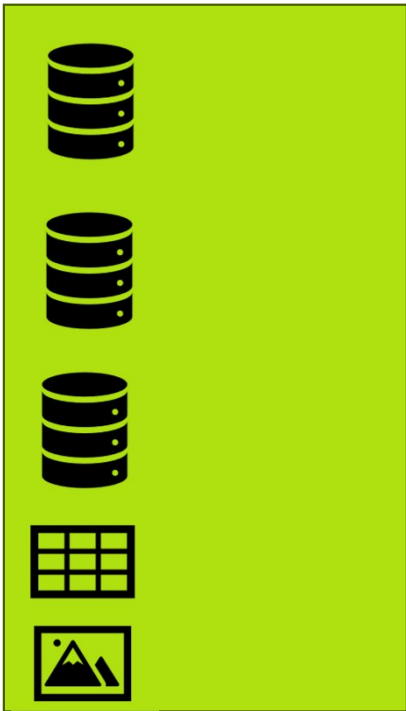

- Scalability
- Flexibility
- Performance
- Unlimited storage

Databricks: Data Platform built in four layers

- Unified data and AI platform built on Apache Spark
- Store, process, analyze large amounts of data
- Each layer increases in structure, governance, performance

Offloading process

Jobs & Pipelines

Create new

- Ingestion pipeline
Ingest data from apps, databases and files
- ETL pipeline
Build ETL pipelines using SQL and Python
- Job
Orchestrate notebooks, pipelines, queries and more

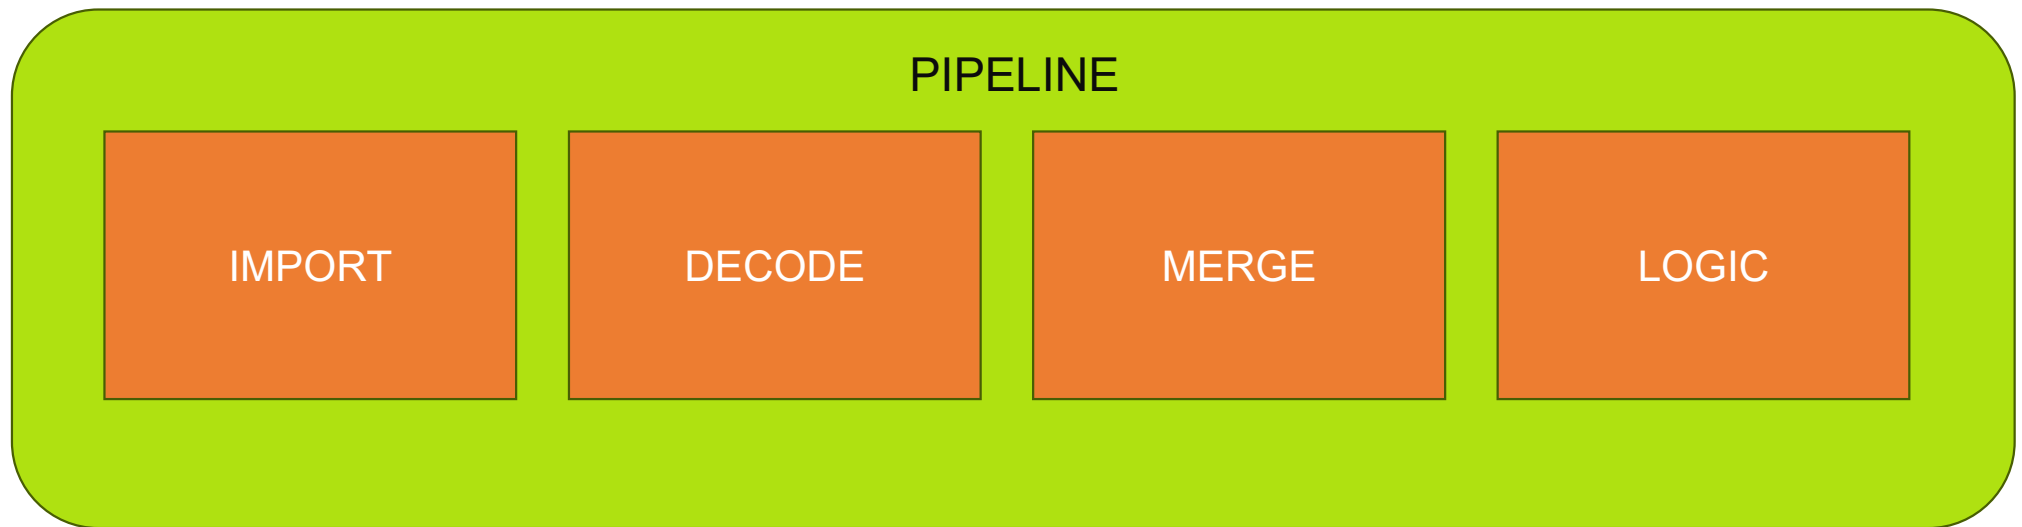

Jobs & pipelines Runs

Filter by name or ID substring

All Jobs Pipelines Pipeline type Owned by me Accessible by me Favorites Tags Run as Create

We follow a medaillon architecture approach

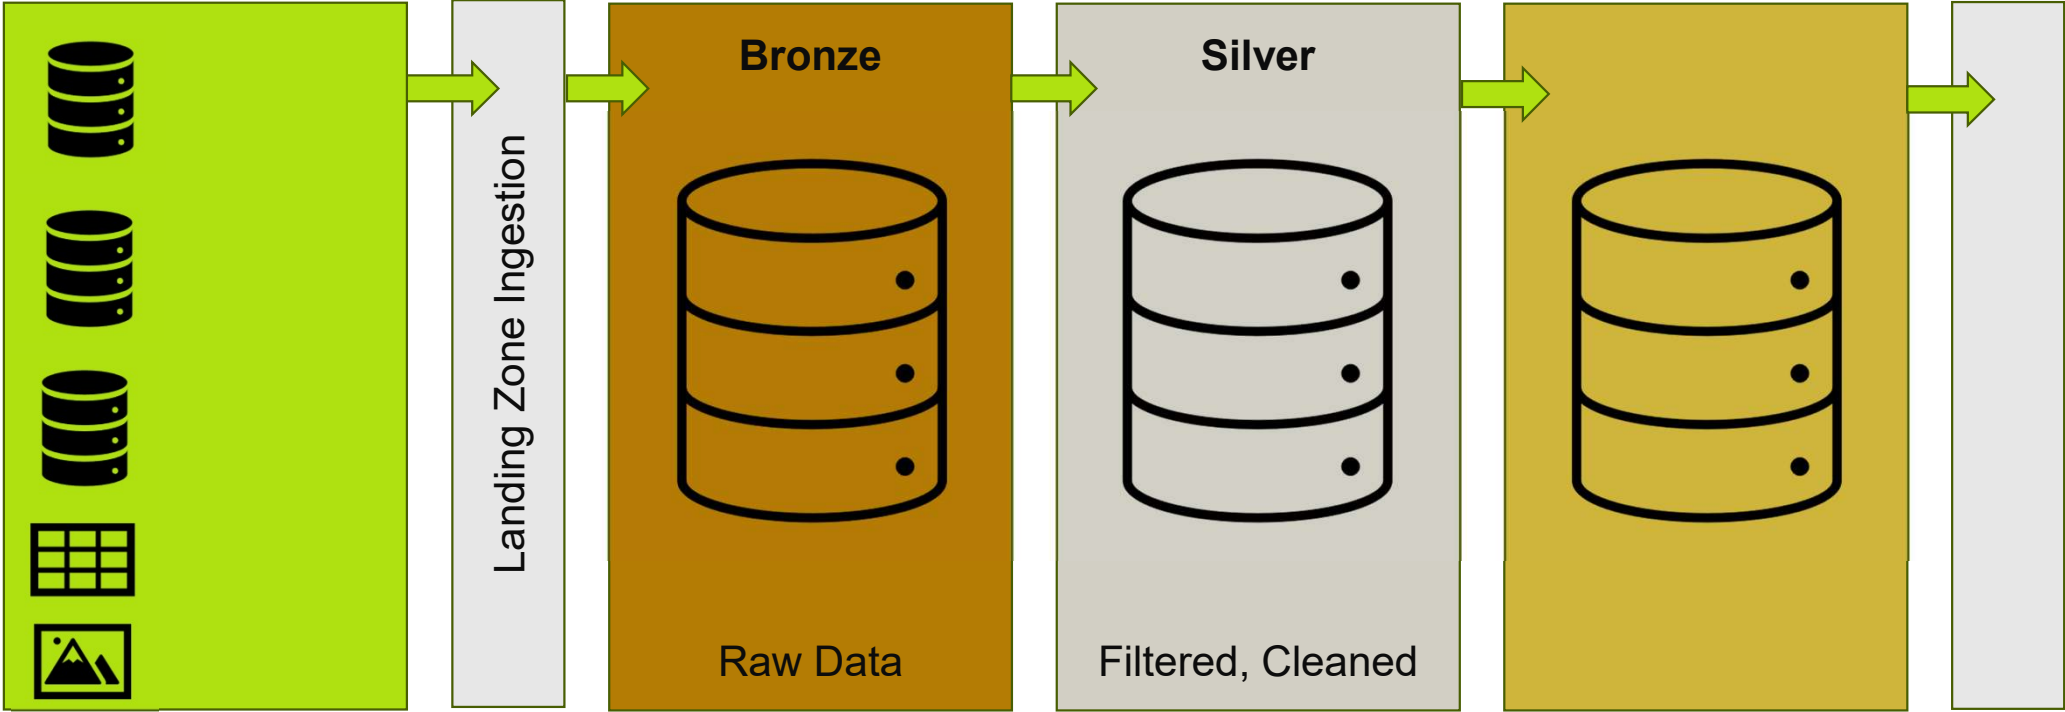

Bronze Layer

- Metadata: Column descriptions, ownership, domain classification, update logic
- DQ checks

 RIS

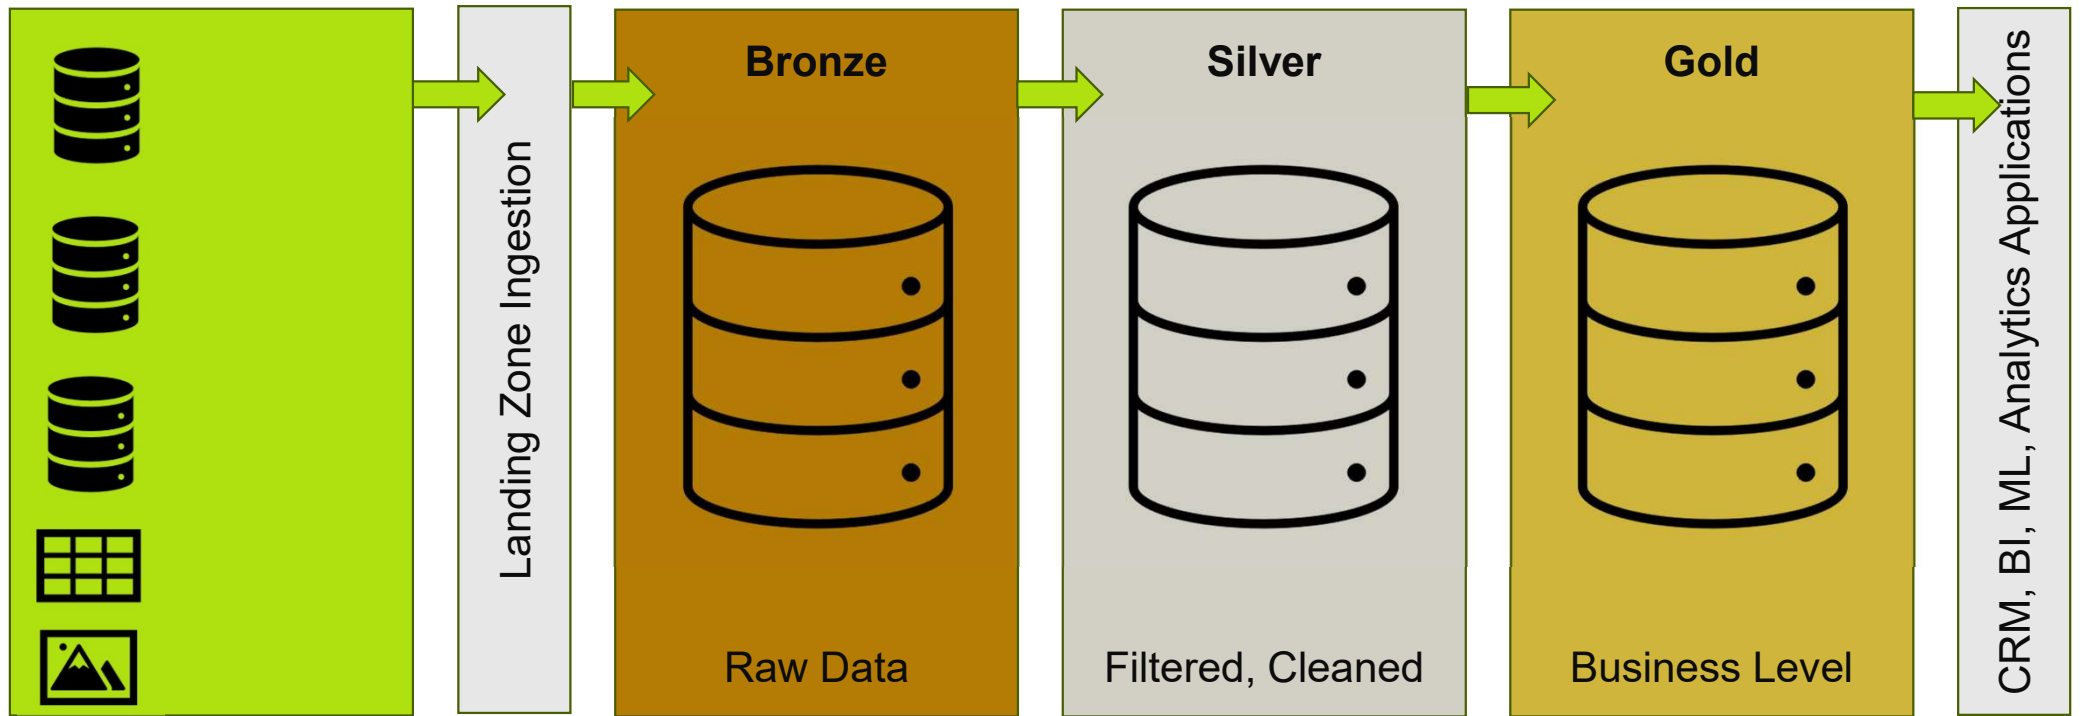

Silver Layer

- Metadata: specific business related descriptions
- Further DQ checks

Gold Layer

- Ready to use data products

The Principles of Data Democratization @RIS

What's next on our roadmap?

- Change data capture
- Infrastructure as Code
- Data Classification

- First LLM application
- Customer 360° model
- Behavioural analytics model

Thank you for your attention!
